

## 10 October 2023 266-23

## Call for submissions – Application A1278

# Beta-Fructofuranosidase from GM *Trichoderma reesei* as a processing aid

FSANZ has assessed an application made by AB Enzymes GmbH to amend the Australia New Zealand Food Standards Code to permit beta-fructofuranosidase from a genetically modified strain of *Trichoderma reesei* to be used as a processing aid in the production of short-chain fructooligosaccharides, and to produce a reduction in sugar levels in treated fruit and vegetable products, and has prepared a draft food regulatory measure. Pursuant to section 31 of the *Food Standards Australia New Zealand Act 1991* (FSANZ Act), FSANZ now calls for submissions to assist consideration of the draft food regulatory measure.

For information about making a submission, visit the FSANZ website at <u>current calls for public</u> comment and how to make a submission.

All submissions on applications and proposals will be published on our website. We will not publish material that we accept as confidential. In-confidence submissions may be subject to release under the provisions of the *Freedom of Information Act 1982*. Submissions will be published as soon as possible after the end of the submission period.

Under section 114 of the FSANZ Act, some information provided to FSANZ cannot be disclosed. More information about the disclosure of confidential commercial information is available on the FSANZ website at information for submitters.

For information on how FSANZ manages personal information when you make a submission, see FSANZ's <u>Privacy Policy.</u>

Submissions should be made in writing; be marked clearly with the word 'Submission'. You also need to include the correct application or proposal number and name. Electronic submissions can be made by emailing your submission to <a href="mailto:submissions@foodstandards.gov.au">submissions@foodstandards.gov.au</a>. FSANZ also accepts submissions in hard copy to our Australia and/or New Zealand offices.

There is no need to send a hard copy of your submission if you have submitted it by email. FSANZ endeavours to formally acknowledge receipt of submissions within 3 business days.

## **DEADLINE FOR SUBMISSIONS:6pm (Canberra time) 21 November 2023**

Submissions received after this date will not be considered unless an extension had been given before the closing date. Extensions will only be granted due to extraordinary circumstances during the submission period. Any agreed extension will be notified on the FSANZ website and will apply to all submitters.

Questions about making a submission or application and proposal processes can be sent to standards.management@foodstandards.gov.au.

Submissions in hard copy may be sent to the following addresses:

Food Standards Australia New Zealand

## **Supporting document**

The following document which informed the assessment of this application is available on the FSANZ website<sup>1</sup>:

SD1 Risk and technical assessment report

<sup>&</sup>lt;sup>1</sup> A1278 - Beta-Fructofuranosidase from GM Trichoderma reesei as a processing aid (foodstandards.gov.au)

## **Executive summary**

AB Enzymes GmbH has applied to Food Standards Australia New Zealand (FSANZ) to amend the Australia New Zealand Food Standards Code (the Code) to permit the enzyme beta-fructofuranosidase (EC 3.2.1.26) to be used as a processing aid. The enzyme is sourced from a genetically modified (GM) strain of *Trichoderma reesei* containing the beta-fructofuranosidase gene from *Aspergillus niger*. The enzyme is proposed to be permitted as a processing aid for the production of short-chain fructooligosaccharides (scFOS) and to produce a reduction in sugar (sucrose) levels in treated fruit and vegetable products. The enzyme would be used at minimum levels necessary to achieve the desired effect, in accordance with Good Manufacturing Practice (GMP).

FSANZ has undertaken an assessment to determine whether the enzyme achieves its technological purpose in the quantity and form proposed, and to evaluate public health and safety concerns that may arise from the proposed use of this enzyme.

The proposed use of beta-fructofuranosidase is technologically justified in the quantity and form proposed during the production of scFOS and the reduction of sucrose in fruit and vegetable products. The enzyme does not perform a technological function in the food for sale, therefore functioning as a processing aid for the purposes of the Code. Evidence has been provided that the enzyme meets relevant international purity specifications in the Code.

No public health and safety concerns were identified in the assessment of beta-fructofuranosidase produced by GM *T. reesei* under the proposed use conditions. *T. reesei* has a long history of safe use as a production microorganism of enzyme processing aids, including several that are already permitted in the Code. The production organism is neither pathogenic nor toxigenic. Analysis of the modified production strain confirmed the presence and stability of the inserted DNA. Bioinformatics analysis indicated that the produced beta-fructofuranosidase does not have substantial homology with known toxins or food allergens.

Based on the reviewed data, FSANZ has concluded that in the absence of any identifiable hazard, an acceptable daily intake 'not specified' is appropriate.

FSANZ has therefore prepared a draft variation to the Code which, if approved, would list the enzyme beta-fructofuranosidase (EC 4.2.1.26) sourced from *T. reesei*, containing the beta-fructofuranosidase gene from *A. niger*, in the table to subsection S18—9(3) as a processing aid. The technological purpose of this enzyme would be as a processing aid for the production of scFOS and to produce a reduction in sugar (sucrose) levels in treated fruit and vegetable products due to the production of scFOS from sucrose in the treated food. The permission would be subject to the condition that the maximum permitted level, or amount of the enzyme that may be present in the food, must be an amount consistent with Good Manufacturing Practice.

FSANZ now seeks submissions to assist consideration of the draft variation to the Code.

## 1 Introduction

## 1.1 The applicant

The applicant is AB Enzymes GmbH, a biotechnology company that develops, manufactures and supplies enzymes preparations for various uses including food processing.

## 1.2 The application

The purpose of the application is to amend the Australia New Zealand Food Standards Code (the Code) to permit the use of the enzyme beta-fructofuranosidase sourced from a genetically modified (GM) strain of *Trichoderma reesei* containing the beta-fructofuranosidase gene from *Aspergillus niger*. The enzyme is proposed to be permitted as a processing aid for the production of short-chain fructooligosaccharides (scFOS) and to produce a reduction in sugar (sucrose) levels in treated fruit and vegetable products.

## 1.3 The current standard

Australian and New Zealand food laws require food for sale to comply with relevant requirements in the Code. The requirements relevant to this application are summarised below.

## 1.3.1 Permitted use

Paragraph 1.1.1—10(6)(c) of the Code provides that food for sale cannot contain, as an ingredient or component, a substance used as a processing aid unless that substance's use as a processing aid is expressly permitted by the Code. Section 1.1.2—13 provides that a substance used as a processing aid in relation to a food is a substance used during the course of processing that meets all of the following conditions:

- it is used to perform a technological purpose during the course of processing
- it does not perform a technological purpose in the food for sale, and
- it is a substance listed in Schedule 18 or identified in section S16—2 as an additive permitted at Good Manufacturing Practice (GMP).

Standard 1.3.3 and Schedule 18 of the Code list permitted processing aids. Enzymes of microbial origin permitted to be used as processing aids are listed in the table to subsection S18—4(5) or in the table to subsection S18—9(3) of Schedule 18, depending on whether a technological purpose has been specified. Enzymes of microbial origin listed in the table to subsection S18—4(5) are permitted for use as a processing aid to perform any technological purpose if the enzyme is derived from the corresponding source specified in the table. The table to subsection S18—9(3) lists those substances, including enzymes derived from particular sources, that are permitted to be used as processing aids for specific technological purposes in relation to:

- if a food is specified—that food; or
- if no food is specified—any food.

Additionally, paragraph 1.3.3—11(c) specifies that the substance may only be used as a processing aid if it is not present in the food at greater than the maximum permitted level for that substance indicated in the table to section S18—9.

Paragraph 1.1.1—10(6)(g) requires that the presence as an ingredient or component in a food for sale of a food produced using gene technology must be expressly permitted by the Code. Paragraph 1.5.2—3(b) provides that permission in the Code for use as a processing aid also constitutes the permission required by paragraph 1.1.1—10(6)(g).

The enzyme from specific microbial sources, which is permitted to be used as a processing aid, is listed in the table to subclause S18—4(5) (see below). It is noted that the name of the enzyme uses the Greek symbol ( $\beta$ ) rather than being spelt out as beta.

Enzymes listed in S18—4(5) are permitted to be used for any technological purpose in the processing of any food.

	Permitted enzymes	(section	1.3.3-6	)—Enz	vmes of	<sup>f</sup> microbial	oriain
--	-------------------	----------	---------	-------	---------	------------------------	--------

Enzyme	Source				
β-Fructofuranosidase (EC 3.2.1.26)	Aspergillus fijiensis ATCC 20611 Aspergillus niger				
	Saccharomyces cerevisiae				

### 1.3.2 Identity and purity requirements

Paragraph 1.1.1—15(1)(b) of the Code requires substances used as processing aids in food to comply with any relevant identity and purity specifications listed in Schedule 3 of the Code.

Subsection S3—2(1) of Schedule 3 incorporates by reference the specifications listed in the Joint FAO/WHO Expert Committee on Food Additives (JECFA) Combined Compendium of Food Additive Specifications FAO/WHO (2006). It also references the United States Pharmacopeial Convention Food Chemicals Codex (13<sup>th</sup> edition, 2022) (FCC 2022). These include specifications for enzyme preparations used in food processing.

## 1.3.3 Labelling requirements

Subsection 1.1.1—10(8) provides that food for sale must comply with all relevant labelling requirements in the Code.

Paragraphs 1.2.4—3(2)(d) and (e) exempt processing aids from the requirement to be declared in the statement of ingredients, unless other requirements apply.

Section 1.5.2—4 of the Code requires a food for sale that consists of a *genetically modified* food<sup>2</sup> (GM food) or has a GM food as an ingredient to be labelled as 'genetically modified', unless an exemption applies. The statement 'genetically modified' must be made in conjunction with the name of the GM food. If the GM food is used as a processing aid, this statement may be included in the statement of ingredients. The requirements imposed by section 1.5.2—4 apply to foods for retail sale and to foods sold to a caterer in accordance with Standard 1.2.1.

<sup>&</sup>lt;sup>2</sup> Section 1.5.2—4(5) defines *genetically modified food* to mean a '\*food produced using gene technology that

<sup>(</sup>a) contains novel DNA or novel protein; or

<sup>(</sup>b) is listed in Section S26—3 as subject to the condition that its labelling must comply with this section' (that being section 1.5.2—4).

## 1.4 International standards

In developing food regulatory measures, Food Standards Australia New Zealand (FSANZ) must have regard to the promotion of consistency between domestic and international food standards. In terms of food safety, the relevant international standard setting body is the Codex Alimentarius Commission (Codex). There is no Codex Alimentarius 'general standard' for enzymes, however as noted above there are internationally recognised specifications for enzyme preparations established by JECFA and Food Chemicals Codex.

In addition, there is a Codex guideline, *Guidelines on Substances used as Processing Aids* (CAC/GL 75-2010), which sets out general principles for the safe use of substances used as processing aids, including that substances used as processing aids shall be used under conditions of GMP.

## 1.5 Reasons for accepting application

The application was accepted for assessment because:

- it complied with the procedural requirements under subsection 22(2) of the *Australia New Zealand Food Standards Act* (FSANZ Act)
- it related to a matter that warranted the variation of a food regulatory measure.

## 1.6 Procedure for assessment

The application is being assessed under the General Procedure in the FSANZ Act.

## 2 Summary of the assessment

## 2.1 Risk assessment

FSANZ has undertaken an assessment to determine whether the enzyme achieves its technological purpose in the quantity and form proposed, and to evaluate public health and safety concerns that may arise from the use of this enzyme (see SD1). A summary of the risk assessment is provided below.

The proposed use of this beta-fructofuranosidase as a processing aid is consistent with its known technological function. Beta-fructofuranosidase performs its technological purpose during the production of the nominated foods and is not performing a technological purpose in the food for sale. It is therefore functioning as a processing aid for the purposes of the Code.

There are relevant identity and purity specifications for the enzyme in the Code, and the applicant provided evidence that the enzyme meets these specifications.

*T. reesei* has a long history of safe use as a production microorganism of enzyme processing aids, including several that are already permitted in the Code. The production organism is neither pathogenic nor toxigenic. Analysis of the genetically modified production strain confirmed the presence and stability of the inserted DNA.

Bioinformatics analysis found no significant homology of the beta-fructofuranosidase enzyme itself with known toxins or food allergens. Studies with another enzyme, phytase, from a production strain within the same safe strain lineage as that used to produce beta-fructofuranosidase, found no evidence of genotoxicity *in vitro* or *in vivo* and no adverse effects in a 90-day oral toxicity study in rats. These findings confirm the safety of the beta-

fructofuranosidase production strain. The no observed adverse effect level (NOAEL) in this study was 1000 mg total organic solids (TOS)/kg bw/day, the highest dose tested.

The theoretical maximum daily intake (TMDI) of the TOS from the beta-fructofuranosidase preparation was calculated to be 1.05 mg TOS/kg bw. A comparison of the NOAEL and the TMDI results in a Margin of Exposure (MOE) of approximately 1000.

Based on the reviewed data it is concluded that in the absence of any identifiable hazard, an acceptable daily intake (ADI) 'not specified' is appropriate.

## 2.2 Risk management

The risk management options available to FSANZ after assessment, were to either:

- reject the application, or
- prepare a draft variation of the Code.

For the reasons listed in this report, FSANZ decided to prepare a draft variation to the Code permitting the use of beta-fructofuranosidase sourced from GM *T. reesei* containing the beta-fructofuranosidase gene from *A. niger* as a processing aid for a specific technological purpose. The permitted technological purpose is for use in the production of scFOS and to produce a reduction in sugar (sucrose) levels in treated fruit and vegetable products. If approved, this permission would be subject to the condition that the maximum permitted level or amount of enzyme that may be present in the food must be consistent with GMP.

The conclusions from the risk and technical assessment were that the proposed use of the enzyme is technologically justified and there were no safety concerns associated with its proposed use.

Other risk management considerations for this application are related to the enzyme and source microorganism nomenclature, specifications and labelling. These are discussed below.

## 2.2.1 Regulatory approval

As stated above, FSANZ has prepared a draft variation to permit the use of the enzyme as a processing aid in the production of scFOS and to produce a reduction in sugar (sucrose) levels in treated fruit and vegetable products.

The express permission for the enzyme to be used as a processing aid also provides the permission for its potential presence in food for sale as a food produced using gene technology (see section 1.3.3 above). The enzyme is a food produced using gene technology for Code purposes as it is derived from 'an organism which has been modified by gene technology' (see subsection 1.1.2—2(3) of the Code) <sup>3</sup>.

## 2.2.2 Enzyme nomenclature, source microorganism nomenclature and specifications

The International Union of Biochemistry and Molecular Biology (IUBMB) uses the accepted name  $\beta$ -fructofuranosidase (IUBMB 2023) for the enzyme numbered EC 3.2.1.26. This is the name used in the draft variation and the name used in existing permissions in Schedule 18 (subsection S18—4(5)). It is noted that the written identifier 'beta' is used in preference to the Greek symbol  $\beta$  in this report as symbols are not always readable on certain media

<sup>&</sup>lt;sup>3</sup> Food produced using gene technology' is defined in subsection 1.1.2—2(3) as meaning 'a food which has been derived or developed from an organism which has been modified by gene technology'.

platforms.

Nomenclature for the host and gene donor organisms – *T. reesei* and *A. niger* respectively – is in accordance with accepted international norms for taxonomy and are used in nomenclature of source microorganisms for permissions of different enzymes within Schedule 18.

There are relevant identity and purity specifications in primary sources of specifications listed in Schedule 3 for enzyme preparations used in food processing (refer to Section 1.2.2 above).

### 2.2.3 Labelling requirements

The labelling provisions in the Code will apply to foods for sale that are manufactured using this processing aid. See section 1.3.3 above.

## 2.2.4 Risk management conclusion

The risk management conclusion is to permit the enzyme beta-fructofuranosidase (EC 3.2.1.26), from GM *T. reesei* containing the beta-fructofuranosidase gene from *A. niger* as a processing aid for a specific technological purpose. The permitted technological purposes are for use in the production of scFOS and to produce a reduction in sugar (sucrose) levels in treated fruit and vegetable products. If approved, the enzyme would be listed in the table to subsection S18—9(3) of the Code, which includes enzymes permitted for a specific technological purpose. The maximum permitted level or amount of the enzyme that may be present in the food would have to be an amount consistent with GMP. The express permission for the enzyme to be used as a processing aid in Schedule 18 of the Code would also provide the permission for the enzyme's potential presence in the food for sale as a food produced using gene technology.

## 2.3 Risk communication

### 2.3.1 Consultation

Consultation is a key part of FSANZ's standards development process. FSANZ developed and applied a standard communication strategy to this application. All calls for submissions are notified via the Food Standards Notification Circular, media release, FSANZ's social media channels and Food Standards News.

The process by which FSANZ approaches standards development matters is open, accountable, consultative and transparent. Public submissions are called to obtain the views of interested parties on the draft variation.

The draft variation will be considered for approval by the FSANZ Board taking into account all public comments received from this call for submissions.

## 2.3.2 World Trade Organization (WTO)

As members of the WTO, Australia and New Zealand are obliged to notify WTO members where proposed mandatory regulatory measures are not substantially the same as existing international standards and the proposed measure may have a significant effect on trade.

There are no relevant international standards. As noted, in section 1.4 above, the relevant international standard setting body is the Codex Alimentarius Commission (Codex). As noted, there is no Codex Alimentarius 'general standard' for processing aids, however there are JECFA and Food Chemicals Codex general specifications, and a Codex guideline on

processing aids. Amending the Code to approve the enzyme as a processing aid is unlikely to have a significant effect on international trade.

Therefore, a notification to the WTO under Australia's and New Zealand's obligations under the WTO Technical Barriers to Trade or Application of Sanitary and Phytosanitary Measures Agreement was not considered necessary.

## 2.4 FSANZ Act assessment requirements

When assessing this application and the subsequent development of a food regulatory measure, FSANZ has had regard to the following matters in section 29 of the FSANZ Act:

### 2.4.1 Section 29

### 2.4.1.1 Consideration of costs and benefits

Changes have been made to the Impact Analysis requirements by the Office of Impact Analysis (OIA) <sup>4</sup>. Impact analysis is no longer required to be finalised with the OIA. Prior to these changes, the OIA advised FSANZ that a Regulatory Impact Statement was not required for the applications relating to GM food and processing aids. This is because applications relating to permitting the use of GM food and processing aids that have been determined to be safe are considered to be minor and deregulatory in nature, as their use will be voluntary if the application is approved. Under the new approach, FSANZ's assessment is that a regulatory impact statement is not required for this application.

FSANZ, however, has given consideration to the costs and benefits that may arise from the proposed measure for the purposes of meeting FSANZ Act considerations. The FSANZ Act requires FSANZ to have regard to whether costs that would arise from the proposed measure outweigh the direct and indirect benefits to the community, government or industry that would arise from the proposed measure (paragraph 29 (2)(a)).

The purpose of this consideration is to determine if the community, government, and industry as a whole is likely to benefit, on balance, from a move from the status quo, where the status quo is rejecting the application. This analysis considers permitting the proposed use of beta-fructofuranosidase from GM *T. reesei* as a processing aid.

The consideration of the costs and benefits in this section is not intended to be an exhaustive, quantitative economic analysis of the proposed measures and, in fact, most of the effects that were considered cannot easily be assigned a dollar value. Rather, the assessment seeks to highlight the potential positives and negatives of moving away from the status quo by approving the variation to the Code proposed by the application.

FSANZ's conclusions regarding the costs and benefits of the proposed measure are set out below. However, information received from the Call for Submissions may result in FSANZ arriving at a different outcome.

Costs and benefits of permitting use of this enzyme

Industry may benefit from a number of improvements and efficiencies from the use of this enzyme. Due to the voluntary nature of the permission, industry will only use the enzyme as proposed where they believe a net benefit exists for them in terms of cost savings.

If industry were to experience cost savings as a result of using this enzyme, industry may

<sup>&</sup>lt;sup>4</sup> Regulatory Impact Analysis Guide for Ministers' Meetings and National Standard Setting Bodies | The Office of Impact Analysis (pmc.gov.au)

pass on some of the cost savings to consumers.

Permitting the proposed use of this enzyme may result in a small, inconsequential cost to government in terms of an addition to the current range of processing aids that are already monitored for compliance.

Conclusions from cost benefit assessment

FSANZ's assessment is that the direct and indirect benefits that would arise from permitting the proposed use of beta-fructofuranosidase from GM *T. reesei* as a processing aid, most likely outweigh the associated costs.

#### 2.4.1.2 Other measures

There are no other measures (whether available to FSANZ or not) that would be more cost-effective than a food regulatory measure developed or varied as a result of the application.

### 2.4.1.3 Any relevant New Zealand standards

The relevant standards apply in both Australia and New Zealand. There are no relevant New Zealand only Standards.

## 2.4.1.4 Any other relevant matters

Other relevant matters are considered below.

### 2.4.2 **Subsection 18(1)**

FSANZ has also considered the three objectives in subsection 18(1) of the FSANZ Act during the assessment.

### 2.4.2.1 Protection of public health and safety

FSANZ undertook a safety assessment (see SD1) and concluded there were no public health and safety concerns associated with the proposed use of this enzyme.

## 2.4.2.2 The provision of adequate information relating to food to enable consumers to make informed choices

The labelling requirements for this enzyme are discussed in Section 2.2.3 of this report.

## 2.4.2.3 The prevention of misleading or deceptive conduct

There are no issues identified with this application relevant to this objective.

## 2.4.3 Subsection 18(2) considerations

FSANZ has also had regard to:

## the need for standards to be based on risk analysis using the best available scientific evidence

FSANZ used the best available scientific evidence to conduct the risk analysis, which is provided in SD1. The applicant submitted a dossier of information and scientific literature as part of its application. This dossier, together with other technical and scientific information, was considered by FSANZ in assessing the application.

## • the promotion of consistency between domestic and international food standards

As noted in section 1.3, there are relevant internationally recognised specifications for enzyme preparations with which the enzyme would need to comply with.

### the desirability of an efficient and internationally competitive food industry

The applicant has advised that it is seeking approval for the enzyme in Brazil, Canada, Denmark, the EU and the USA, as well as planning to submit to China, Thailand, Indonesia and South Korea. If the draft variation is approved, it would make Australia and New Zealand consistent with the other countries where use of the enzyme may be permitted in the future.

In this way, Australia and New Zealand would remain competitive with other international markets. This would also help foster continued innovation and improvements in food manufacturing techniques and processes.

The conclusion of the risk assessment is there are no public health and safety concerns associated with the production microorganism or with using the enzyme as a food processing aid. It is therefore appropriate that Australian and New Zealand food industries are given the opportunity to benefit from the proposed use of this enzyme.

Ultimately, the domestic food industry will make their own economic decisions, taking into account the costs and benefits of using the new enzyme, to determine if it is of benefit to their particular business.

## • the promotion of fair trading in food

No issues were identified for this application relevant to this objective.

## • any written policy guidelines formulated by the Food Ministers Meeting<sup>5</sup>

The Ministerial Policy Guideline *Addition to Food of Substances other than Vitamins and Minerals*<sup>6</sup> includes specific order policy principles for substances added to achieve a solely technological function, such as processing aids. These specific order policy principles state that permission should be granted where:

- the purpose for adding the substance can be articulated clearly by the manufacturer as achieving a solely technological function (i.e. the 'stated purpose')
- the addition of the substance to food is safe for human consumption
- the amounts added are consistent with achieving the technological function
- the substance is added in a quantity and a form which is consistent with delivering the stated purpose
- no nutrition, health or related claims are to be made in regard to the substance.

FSANZ determined that permitting the proposed use of this enzyme as a processing aid would be consistent with these specific order policy principles for 'Technological Function'. All other relevant requirements of the policy guideline are similarly met.

<sup>&</sup>lt;sup>5</sup> Formerly known as the Forum on Food Regulation.

<sup>&</sup>lt;sup>6</sup> https://foodregulation.gov.au/internet/fr/publishing.nsf/Content/publication-Policy-Guideline-on-the-Addition-of-Substances-other-than-Vitamins-and-Minerals

## 3 Draft variation

The draft variation to the Code is at Attachment A and is intended to take effect on gazettal.

A draft explanatory statement is at Attachment B. An explanatory statement is required to accompany an instrument if it is lodged on the Federal Register of Legislation.

### DRAFT EXPLANATORY STATEMENT

Food Standards Australia New Zealand Act 1991

## Food Standards (Application A1278 – Beta-Fructofuranosidase from GM Trichoderma reesei as a processing aid) Variation

## 1. Authority

Section 13 of the *Food Standards Australia New Zealand Act 1991* (the FSANZ Act) provides that the functions of Food Standards Australia New Zealand (the Authority) include the development of standards and variations of standards for inclusion in the *Australia New Zealand Food Standards Code* (the Code).

Division 1 of Part 3 of the FSANZ Act specifies that the Authority may accept applications for the development or variation of food regulatory measures, including standards. This Division also stipulates the procedure for considering an application for the development or variation of food regulatory measures.

The Authority accepted Application A1278 which sought to amend the Code to permit beta-fructofuranosidase (EC 3.2.1.26) from a genetically modified strain of *Trichoderma reesei* to be used as a processing aid in the production of short-chain fructooligosaccharides, and to produce a reduction in sugars levels in treated fruit and vegetable products. The Authority considered the application in accordance with Division 1 of Part 3 and has prepared a draft variation - the *Food Standards (Application A1278 – Beta-Fructofuranosidase from GM* Trichoderma reesei *as a processing aid) Variation*.

## 2. Variation will be a legislative instrument

If approved, the draft variation would be a legislative instrument for the purposes of the *Legislation Act 2003* (see section 94 of the FSANZ Act) and be publicly available on the Federal Register of Legislation (<a href="www.legislation.gov.au">www.legislation.gov.au</a>).

If approved, this instrument would not be subject to the disallowance or sunsetting provisions of the *Legislation Act 2003*. Subsections 44(1) and 54(1) of that Act provide that a legislative instrument is not disallowable or subject to sunsetting if the enabling legislation for the instrument (in this case, the FSANZ Act): (a) facilitates the establishment or operation of an intergovernmental scheme involving the Commonwealth and one or more States; and (b) authorises the instrument to be made for the purposes of the scheme. Regulation 11 of the *Legislation (Exemptions and other Matters) Regulation 2015* also exempts from sunsetting legislative instruments a primary purpose of which is to give effect to an international obligation of Australia.

The FSANZ Act gives effect to an intergovernmental agreement (the Food Regulation Agreement) and facilitates the establishment or operation of an intergovernmental scheme (national uniform food regulation). That Act also gives effect to Australia's obligations under an international agreement between Australia and New Zealand. For these purposes, the Act establishes the Authority to develop food standards for consideration and endorsement by the Food Ministers Meeting (FMM). The FMM is established under the Food Regulation Agreement and the international agreement between Australia and New Zealand, and consists of New Zealand, Commonwealth and State/Territory members. If endorsed by the FMM, the food standards on gazettal and registration are incorporated into and become part of Commonwealth, State and Territory and New Zealand food laws. These standards or instruments are then administered, applied and enforced by these jurisdictions' regulators as

part of those food laws.

## 3. Purpose

The Authority has prepared a draft variation amending the table to subsection S18—9(3) in Schedule 18 of the Code to permit beta-fructofuranosidase from genetically modified *Trichoderma reesei* to be used as a processing aid in the production of short-chain fructooligosaccharides, and to produce a reduction in sugar levels in treated fruit and vegetable products. If approved, this permission would be subject to the condition that the maximum permitted level or amount of the enzyme that may be present in the food must be consistent with Good Manufacturing Practice (GMP).

### 4. Documents incorporated by reference

The draft variation does not incorporate any documents by reference.

However, existing provisions of the Code incorporate documents by reference that would prescribe identity and purity specifications for the processing aid to be permitted by the draft variation. Section 1.1.1—15 of the Code requires substances used as processing aids to comply with any relevant identity and purity specifications listed in Schedule 3 of the Code. Section S3—2 of Schedule 3 incorporates by reference the specifications listed in the Joint FAO/WHO Expert Committee on Food Additives (JECFA) Combined Compendium of Food Additive Specifications (FAO JECFA Monographs 26 (2021)) and the United States Pharmacopeial Convention (2022) Food Chemicals Codex (13th edition). These include general specifications for the identity and purity of enzyme preparations used in food processing.

### 5. Consultation

In accordance with the procedure in Division 1 of Part 3 of the FSANZ Act, the Authority's consideration of Application A1278 will include one round of public consultation following an assessment and the preparation of a draft variation and associated assessment summary. A call for submissions (including the draft variation) will be open for a six-week period.

Changes have been made to the Impact Analysis requirements by the Office of Impact Analysis (OIA) <sup>7</sup>. Impact analysis is no longer required to be finalised with the OIA. Prior to these changes, the OIA advised FSANZ that a Regulatory Impact Statement was not required for the applications relating to GM food and processing aids. This is because applications relating to permitting the use of GM food and processing aids that have been determined to be safe are considered to be minor and deregulatory in nature, as their use will be voluntary if the application is approved. Under the new approach, FSANZ's assessment is that a regulatory impact statement is not required for this application.

## 6. Statement of compatibility with human rights

If approved, this instrument would be exempt from the requirements for a statement of compatibility with human rights as it would be a non-disallowable instrument under section 44 of the *Legislation Act 2003*.

## 7. Variation

Clause 1 provides that the name of the variation is the *Food Standards (Application A1278 – Beta-Fructofuranosidase from GM* Trichoderma reesei *as a processing aid) Variation.* 

<sup>&</sup>lt;sup>7</sup> Regulatory Impact Analysis Guide for Ministers' Meetings and National Standard Setting Bodies | The Office of Impact Analysis (pmc.gov.au)

Clause 2 provides that the Code is amended by the Schedule to the variation.

Clause 3 provides that the variation commences on the date of gazettal of the instrument.

**Item [1]** of the Schedule to the draft variation would insert a new entry, in alphabetical order, into column 1 of the table to subsection S18—9(3) of the Code. The new entry consists of the following enzyme:

• 'β-Fructofuranosidase (EC 3.2.1.26) sourced from *Trichoderma reesei* containing the β-fructofuranosidase gene from *Aspergillus niger*'

The International Union of Biochemistry and Molecular Biology uses the accepted name  $\beta$ -fructofuranosidase for the enzyme numbered EC 3.2.1.26 (IUBMB 2023). This is the name used in the draft variation and in Schedule 18 (subsection S18—4(5)). However, 'beta-fructofuranosidase' is referred to elsewhere in this draft Explanatory Statement to avoid using symbols in reports which can be hard to read on some platforms.

The permitted technological purpose for this enzyme would be prescribed in column 2 of the table i.e. for use as a processing aid in the production of short-chain fructooligosaccharides; and to produce a reduction in sugar levels in treated fruit and vegetable products.

The permission would be subject to the condition, as prescribed in column 3 of the table, that the maximum permitted level or amount of this enzyme that may be present in the food must be consistent with GMP.

If approved, the draft variation would permit the proposed use of the enzyme  $\beta$ -fructofuranosidase (EC 3.2.1.26) sourced from *Trichoderma reesei* containing the  $\beta$ -fructofuranosidase gene from *Aspergillus niger* as a processing aid in accordance with the Code.
