Application A1051 - Food derived from
Herbicide-tolerant Soybean Event F072

I oppose this application.

Reasons

1. The applicant's toxicity studies have been carried out by their own research facilities and are unpublished.

There is no evidence to demonstrate that these studies have been peer-reviewed, nor is evidence provided to show that the facilities operate independently of the applicant.

Therefore, it is fair to say that the studies are likely to be biased by the applicant's interests, and are not robust studies.

2. FSANZ has not demonstrated that it operates at arm's length to the applicant.

There is no evidence provided by the FSANZ, and, independently audited and verified, to ensure that FSANZ operates according

2
to its charter to protect public
safety in the field of food safety.
In accepting ~~the~~ potentially ~~the~~ unsound
science supplied by the applicant,
FSANZ would confirm to me
that its focus is on the
applicant's interests.
