Subject: submission on application A1186

Please accept my submission on application A1186 Soy leghemoglobin in meat analogue products and keep me informed on the progress.

I strongly object to this application as it is not proven to be safe despite the claims of the applicants. It is outrageous to subject the public to this filler product. It will further degrade the diet of those living in poverty and it can potentially cause more health problems which we can not afford.

I am not a scientist, however I am a retired radiographer and an aware member of the public who is watching our population become fatter and less healthy as the consumption of processed foods and food additives increases. We do not need to add to this delima by allowing soy products which are largely genetically modified to by added to foods. It does not require a degree to see how damaging it is to our society to be consuming less healthy vegetables and more processed foods.

Please take a responsible stand on this issue and save New Zealanders from this misguided degradation of our food.

Thank you for considering this submission.
