To whom it concerns,

No! I don't want to eat genetically modified (GM) foods!

All GM foods should be independently assessed for their health and environmental hazards and risks, be labelled as GM, and be traceable. This will allow farmers, food producers, retailers, and shoppers to avoid them, for many important reasons.

I strongly oppose changes to the Food Code that would allow a wide range of GM foods to be sold without labelling. These changes would undermine FSANZ's key responsibilities to ensure food safety and our right to know what is in our food.

Agrochemical companies cannot be trusted to self-assess the safety of GM foods as they have an appalling record of manipulating data to promote dangerous products.

Gene editing techniques have been found to make genetic changes that could never occur in nature and to result in widespread genetic damage that often goes undetected by GM developers.

The proposed changes would allow genetically modified animal products into our food chain with no regulation or labelling.

I support expanding the definition for 'gene technology' so FSANZ continues to assess and regulate all techniques and methods of genetic modification, other than conventional breeding. The proposal to deregulate new and emerging GM techniques and their food products, which pose new and unassessed risks, is completely unacceptable.

Yours sincerely,
