Dear Food Standards submissions,

I'm writing to oppose the upcoming bill to allow food editing through gene technology.

I believe this will massively change our food and thus food gene editing.

What does this mean?

FSANZ would change the meanings of 'food produced using gene technology' and 'gene technology' to exclude most genetically manipulated (GM) foods from safety assessment or regulation.

Plus food sovereignty will be open to corporate ownership.

Food producers would essentially self-assess the safety of their own GM foods, derived from GM animals, plants or micro-organisms. Present or future GM methods, including 'new breeding techniques' (NBT), are covered

I believe this will not keep our food and future food safe from the technological experiments of gene editing.

Please oppose anything to do with this upcoming bill as it is not in the interest of people or nature.
