Subject: Submission: for Proposal P1007 - Primary Production and Processing Requirements for Raw Milk
Follow Up Flag: Follow up
Flag Status: Blue

We are a family of two adults and two young boys who have, in the last 2-3 months made the switch to raw milk. In the time we have done so, my younger son's eczema which he has had since birth, has improved markedly.

We as a family have consumed this milk without any negative side effects whatsoever and would rather go without than return to pasteurised, homogenised milk. We firmly believe in the consumption of wholesome and natural foods as close as possible to what nature intended and we believe the Proposal by FSANZ with regard to the legislation and regulation of raw dairy products is a step in the right direction for the nutritional and health benefits from the consumption of these products to be more readily available to the wider community.

Yours sincerely,
N. Komaitai & family.
