To whom it may concern,

I am strongly opposed to GM in any of our foods. To use genetically modified anything is putting our health at risk and the fact that you do not rely on independent research, but rather just accept what the big companies tell you is really scary for me as a consumer. I should be able to trust that a government body in charge of food would do the right thing and investigate things such as the genetic modification of food properly.

By allowing it into the country you put all sorts of things at risk. Look into the research showing what genetically modified food really does to the body. Do you want complete infertility within a few generations? Do you want to ruin the crops grown here in Australia? We have some of the best produce in the world and allowing GM food suppies into our shops and farms will destroy this.

Genetic modification is abhorrent and I cannot believe it is allowed anywhere.

Really all this shows is that the big companies can buy whoever they want to ensure profits for themselves. That is, if you do not stand up and reject this, they have bought you.

I urge you to not allow GM ANYTHING into Australia. I make a conscious choice to not eat those sorts of food, even when travelling. I love Australia since we have so much choice. Please so not take this away.

Regards,

Kylie Ofiu
