Submission Text:	<p>I am against the Irradiation of Raspberries and blueberries on the grounds that it is a new technology with a limited history showing it is safe for human use. It is known to alter the chemical make up and nutritional value of fruit. It effects vitamins such as vitamin A, C, E and thiamine. Irradiation has been proved to form volatile toxic chemicals such as benzene and toluene associated with cancer and birth defects. For all of the above mentioed details I am strongly against the irradiation of Raspberries and Blueberries.</p>
