Subject: A SUBMISSION ON THE APPLICATION A1192 -FOOD DERIVED FROM HERBICIDE TOLERANT CORN LINE MON87429

21 May

I reject this Application A1192 - Food derived from herbicide Tolerant corn line mon87429 for the following reasons:

1. FSANZ assessment of MON87429 is based on insufficient research, because it relies on inaccurate and purely theoretical data. Which is totally unacceptable.
2. It is the responsibility of FSANZ to prioritize and ensure outstanding food standards so produce is fresh and free of pesticides.
3. Allowing a food to be sprayed with a cocktail of toxic herbicides, all of which have a well known history of chronic health effects, is irresponsible, criminal and egregious, further endangering public health.
3. The seeds are coated with neonicotinoid insecticide which destroy bees, bumble bees and pollinating insects.
4. The corn is developed to survive spraying with up to twelve different pesticides severely risks exposing consumers in NZ or Australia to further increased levels of toxic chemicals. And further soil and water poisoning which intoxicates communities further.
5. Pesticides and herbicides used in the food chain is a violation of the natural law of our living earth and all living sentient beings. With well known dangerous results to the immune system, the brain and gut microbiome of every living sentient being including soil microbiome, insects, animals, children etc. Its well known and documented they erode and undermine the immune systems of plants, humans, arthropods, animals and soil microbiome and also seep into ground soil water, waterways and the food chain, the resulting outcome is one growing epidemic physical and mental sickness. It is well documented and known these toxic herbicides and pesticides get into the brain, they tear internal membrane, damage good gut microbiome and cross the blood brain barrier leaving every being wide open to illness. Which is irresponsible and totally unacceptable.
6. Data cited in Bayer's application has come from Monsanto, and who have consistently shown they lack transparency and cannot be trusted due to their manipulation and readiness to omit data.
7. Change needs to happen, because synthetic chemicals and GMO foods are making people, communities, soils, arthropods, underground water and waterways sick.

Finally I would remind you of all the 50 000 farmers who committed suicide over 2 to 3 years due to the shoddy practise of GMO monopoly of farms, with severe harm to farmers, communities and it's resulting destruction. It is criminal.
