Subject: Submission on A1193 Irradiation of all fresh fruit and vegetables'.

To the Queensland Government

I wish to express my desire that this submission not go ahead.

I do not wish to buy irradiated food. Food should remain in the most natural state possible in order that the nutrients be retained so that the fruit and vegetables provide the full amount of vitamins and minerals possible for the Australian people.

Australia has been known for the quality and dense nutrition value in the food that is grown. To irradiate the food will not only be detrimental to the health of those in Australia but it will also ruin the reputation for good quality food that Australia is known for.

Research has shown in past time that the more food is changed from its natural state the more that it has been shown to cause disease. Often this isn't evidenced until several years have passed, however this is too late to undo the damage.

In the light of this please retain the health benefit currently experienced by Australians by not continuing with the intended irradiation of fresh fruit and vegetables.

Yours sincerely,
