Subject: SUBMISSION AGAINST IRRADIATION OF FOOD

Categories: [REDACTED]

I object strongly to irradiation of any of our food or food brought into Australia.
It is well known that irradiation is dangerous to the health of humans and animals and likely to plants as well. There is ample radiation that we are all subjected to via our environment and in Health treatments without the accumulative effects of irradiated food.

The precautionary principle must be adhered to. Too many experiments have been unleashed onto our unsuspecting community and onto our environment with disastrous effects.

Do not legislate for irradiation of food.

Yours faithfully
