Subject: Submission on A1193 Irradiation of all fresh fruits and vegetables

Categories: [REDACTED]

To Whom It May Concern,
I would sincerely hope that FSANZ reject proposal A 1092 because of the following grounds; Irradiated foods would adversely affect the nutritional value of our food supply. It would also adversely affect the safety of the human food supply in Australia and New Zealand. Yet S1092 is being assessed in isolation from its total dietary context.

Irradiated pet food was banned after a significant number of cat deaths in Australia. Until adverse health affects are fully explored no irradiated foods should be allowed to be consumed or enter the human food supply.

FSANZ ignores the many alternatives to irradiation that exist for achieving the stated phytosanitary goals of A 1092.

Labelling requirements are substandard I want to know and choose what I am buying and eating.

I would hope that our fresh foods are left that way. There are enough pesticides and chemicals in our foods without irradiating them as well.

Thankyou
