

13 March 2002 08/02

INITIAL / DRAFT ASSESSMENT [PRELIMINARY ASSESSMENT / FULL ASSESSMENT - SS.13/15] - S.36

APPLICATION A455

MAXIMUM RESIDUE LIMITS

DEADLINE FOR PUBLIC SUBMISSIONS to the Authority in relation to this matter: 24 APRIL 2002

(see 'Invitation for Public Submissions' for details)

EXECUTIVE SUMMARY

- This Application (A455) seeks to amend Maximum Residue Limits (MRLs) for nonantibiotic agricultural and veterinary chemicals in the *Food Standards Code*. It is a routine application from the National Registration Authority for Agricultural and Veterinary Chemicals (NRA), to update the *Food Standards Code* in order to reflect current registration status of agricultural and veterinary chemicals in use in Australia.
- On 24 November 2000, the Australia New Zealand Food Standards Council (ANZFSC) adopted the *Australia New Zealand Food Standards Code* (published as Volume 2 of the *Food Standards Code*). Subsequently, all applications to amend MRLs will now be incorporated into Volumes 1 and 2 of the *Food Standards Code* (Standard A14 and Standard 1.4.2 respectively). Consequently, all references throughout this document to the *Food Standards Code* are references to both Volumes 1 and 2 of the *Food Standards Code*.
- The Agreement between the Commonwealth of Australia and the Government of New Zealand to establish a system for the development of joint food standards (the Treaty), excluded MRLs for agricultural and veterinary chemicals in food from the joint Australia New Zealand food standards setting system. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.
- The Therapeutic Goods Administration (TGA) of the Commonwealth Department of Health and Aged Care has undertaken an appropriate toxicological assessment of the agricultural and veterinary chemicals and has established relevant acceptable daily intakes (ADI).
- The dietary exposure assessments indicate that the residues associated with the proposed MRLs for agricultural and veterinary chemicals do not represent an unacceptable risk to public health and safety.
- None of the Australia New Zealand Food Authority's (ANZFA's) section 10 objectives of food regulatory measures are compromised by the proposed changes.
- There are no MRLs for antibiotic residues in this Application.
- ANZFA will make a Sanitary and Phytosanitary notification to the World Trade Organization.

1. ISSUES

An Application was received from the NRA on 13 and 29 November 2001 and 10 January 2002, seeking amendment to Standards A14 and 1.4.2 of the *Food Standards Code*. The proposed amendments to the Standards would align MRLs for non-antibiotic agricultural and veterinary chemicals, in the *Food Standards Code* with the MRLs in the NRA MRL Standard

The objective of the proposed amendment in this Application is to allow the legal sale under food legislation of legally treated produce. The NRA has already established MRLs under the NRA's legislation, and now seeks, by way of this application to include the amendments in the *Food Standards Code*.

In summary, the proposed changes are:

- add MRLs for certain foods for the new chemicals, acetamiprid and quinoxyfen;
- add MRLs for certain foods for aminoethoxyvinylglycine, cadusafos, indoxacarb, metalaxyl, picolinafen, procymidone, tebufenozide, thiodicarb and trifloxystrobin;
- change MRLs for certain foods for aminoethoxyvinylglycine, bifenthrin, indoxacarb, metalaxyl, myclobutanil, procymidone and spinosad; and
- add temporary MRLs for certain foods for azoxystrobin, butafenacil, dichlorprop, dithiocarbamates, metalaxyl and spinosad.

1.2 Antibiotic MRLs

There are no MRLs for antibiotic residues in this Application.

2. BACKGROUND

2.1 The use of agricultural and veterinary chemicals

In Australia, the NRA is responsible for registering agricultural and veterinary chemical products, granting permits for use of chemical products and regulating the sale of agricultural and veterinary chemical products. Following the sale of these products, the use of the chemicals is then regulated by State and Territory 'control of use' legislation.

Before registering such a product, the NRA must be satisfied that the use of the product will not result in residues that would be an undue risk to the safety of people, including people using anything containing its residues.

When a chemical product is registered for use or a permit for use granted, the NRA includes MRLs in its NRA MRL Standard. These MRLs are then adopted into control of use legislation in some jurisdictions and assist States and Territories in regulating the use of agricultural and veterinary chemicals.

2.2 Maximum Residue Limit applications

After registering the agricultural or veterinary chemical products, based on their scientific evaluations, the NRA makes applications to ANZFA to include MRLs in the *Food Standards Code*. ANZFA reviews the information provided by the NRA and validates whether the dietary exposure is within agreed safety limits. If satisfied that the residues do not represent an unacceptable risk to public health and safety and following consultation, ANZFA makes recommendations to the ANZFSC to adopt a draft variation to the *Food Standards Code* and include the MRLs in the *Food Standards Code*. The inclusion of the MRLs in the *Food Standards Code* has the effect of allowing legally treated produce to be legally sold, provided that the residues in the treated produce do not exceed the MRL.

Changes to Australian MRLs reflect the changing patterns of agricultural and veterinary chemicals available to farmers. These changes include both the development of new products and crop uses, and the withdrawal of older products following review.

2.3 Maximum Residue Limits

The MRL is the highest concentration of a chemical residue that is legally permitted or accepted in a food. The MRL does <u>not</u> indicate the amount of chemical that is always present in a treated food but it does indicate the highest residue that could possibly result from the registered conditions of use. The concentration is expressed in milligrams per kilogram (mg/kg) of the food.

MRLs assist in indicating whether an agricultural or veterinary chemical product has been used according to its registered use and if the MRL is exceeded then this indicates a likely misuse of the chemical product. MRLs are also used as standards for the international trade in food. MRLs, while not direct public health limits, act to protect public health and safety by minimising residues in food consistent with the effective control pests and diseases.

As stated above, the NRA includes MRLs in its NRA MRL Standard when they register a chemical product for use or grant a permit for use. The NRA then notifies ANZFA of these MRLs so that ANZFA may consider them for inclusion into the *Food Standards Code*.

In relation to MRLs, ANZFA's role is to ensure that the potential residues in food do not represent an unacceptable risk to public health and safety. ANZFA will <u>not</u> recommend MRLs for inclusion in the *Food Standards Code* where the dietary exposure to the residues of a chemical could represent an unacceptable risk to public health and safety. In assessing this risk, ANZFA conducts dietary exposure assessments in accordance with internationally accepted practices and procedures.

In summary, the MRLs in the NRA MRL Standard are used in some jurisdictions to assist in regulating the use of agricultural and veterinary chemical products under State and Territory 'control-of-use' legislation.

Whereas the MRLs in the *Food Standards Code* apply in relation to the sale of food under State and Territory food legislation and the inspection of imported foods by the Australian Quarantine and Inspection Service.

2.4 Food Standards-setting in Australia and New Zealand

The Treaty excluded MRLs for agricultural and veterinary chemicals in food from the joint food standards setting system. Australia and New Zealand separately and independently develop MRLs for agricultural and veterinary chemicals in food.

2.5 Trans Tasman Mutual Recognition Arrangement

Following the commencement of the Trans Tasman Mutual Recognition Arrangement (TTMRA) between Australia and New Zealand on 1 May 1998:

- food produced or imported into Australia, which complies with Standard A14 or Standard 1.4.2 of the *Food Standards Code* can be legally sold in New Zealand; and
- food produced or imported into New Zealand, which complies with the *New Zealand* (*Maximum Residue Limits of Agricultural Compounds*) *Mandatory Food Standard*, 1999 can be legally sold in Australia.

2.6 Food Standards Code

On 24 November 2000, the ANZFSC adopted the *Australia New Zealand Food Standards Code* (published as Volume 2 of the *Food Standards Code*). Subsequently all applications to amend MRLs will now be incorporated into Volumes 1 and 2 of the *Food Standards Code* (Standard A14 and Standard 1.4.2 respectively). Consequently all references throughout this document to the *Food Standards Code* are references to both Volumes 1 and 2 of the *Food Standards Code*.

2.7 Limit of quantification

Some of the proposed MRLs in this application are at the limit of quantification (LOQ) and are indicated by an * in the 'Summary of the Requested MRLs for each Chemical...' (Attachment 2). The LOQ is the lowest concentration of an agricultural or veterinary chemical residue that can be identified and quantitatively measured in a specified food, agricultural commodity or animal feed with an acceptable degree of certainty by a regulatory method of analysis. The inclusion of the MRLs at the LOQ means that no detectable residues of the relevant chemical should occur. ANZFA incorporates MRLs at the LOQ in the *Food Standards Code* to assist in identifying a practical benchmark for enforcement and to allow for future developments in methods of detection that could lead to a lowering of this limit.

2.8 MRLs for Permits

Some of the proposed MRLs in this Application are temporary and are indicated by a 'T' in the Summary of the Requested MRLs for A455 (Attachment 2). These MRLs may include uses associated with:

- the minor use program;
- off-label permits for minor and emergency uses; or

• trial permits for research.

ANZFA does not issue permits or grant permission for the temporary use of agricultural and veterinary chemicals. Further information on MRLs for permits can be found on the website of the NRA at http://www.nra.gov.au or by contacting the NRA on +61 2 6272 5158.

Appropriate toxicology, residue, animal transfer, processing and metabolism studies were provided to the NRA in accordance with the *Guidelines for Registering Agricultural and Veterinary Chemicals, the Ag and Vet Requirements Series, 1997* to support the MRLs in the commodities as outlined in this application. Full evaluation reports for individual chemicals are available upon request from the relevant Project Manager at ANZFA on +61 2 6271 2222.

3. DIETARY EXPOSURE ASSESSMENT

Before an agricultural or veterinary chemical is registered, the *Agricultural and Veterinary Chemicals Code*, 1994 requires the NRA to be satisfied that there will not be any appreciable risk to the consumer, to the person handling, applying or administering the chemical, to the environment, to the target crop or animal or to trade in an agricultural commodity. ANZFA's responsibility is to ensure that the residues in food resulting from the use of agricultural and veterinary chemical products do not represent an unacceptable risk to public health and safety.

Comparing the dietary exposure with the relevant health standard assesses the potential public health implications. There are a number of methods for estimating dietary exposure based on the type of information that is available. In this application, ANZFA considered the National Estimated Daily Intake (NEDI) and the National Estimated Short Term Intake (NESTI).

3.1 National Estimated Daily Intake

The NEDI may represent a more realistic estimate of dietary exposure if the data are available and it is the preferred calculation. It may incorporate more refined food consumption data including that for specific sub-groups of the population. The NEDI calculation may take into account such factors as the proportion of the crop or commodity treated; residues in edible portions and the effects of processing and cooking on residue levels; and may use median residue levels from supervised trials rather than the MRL to represent pesticide residue levels. When adequate information is available, monitoring and surveillance data or total diet studies may also be used such as the Australian Total Diet Survey (ATDS).

The chronic dietary risk estimated by the NEDI calculation encompasses all registered/temporary uses of MRLs and dietary intake data from the 1995 National Nutrition Survey of Australia. The calculation has been made in accordance with the Guidelines for predicting dietary intake of pesticide residues (revised) (World Health Organization, 1997).

3.2 Acceptable Daily Intake

The ADI is the daily intake of an agricultural or veterinary chemical, which, during the consumer's entire lifetime, appears to be without appreciable risk to the health of the consumer. This is based on all the known facts at the time of the evaluation of the chemical. The ADI is expressed in milligrams of the chemical per kilogram of body weight.

ANZFA considers that the dietary exposure to the residues of a chemical is acceptable where the best estimate of dietary exposure does not exceed or is less than the ADI.

3.3 National Estimated Short Term Intake

The NESTI is used to estimate acute dietary exposure. Acute (short term) dietary exposure assessments are undertaken when an acute reference dose (ARfD) has been determined for a chemical. Acute dietary exposures are normally only estimated based on consumption of raw unprocessed commodities (fruit and vegetables) but may include consideration of meat, offal, cereal, milk or dairy product consumption on a case-by-case basis.

The NESTI calculation incorporates a large portion (97.5 percentile) of food consumption data and can take into account such factors as:

- the highest residue on a composite sample of an edible portion;
- the supervised trials median residue (STMR) that represents typical residues in an edible portion resulting from the maximum permitted pesticide use pattern;
- processing factors which affect changes from the raw commodity to the consumed food; and
- the variability factor.

ANZFA has used the ARfD set by the TGA and Joint FAO/WHO Meeting on Pesticide Residues, the consumption data from the 1995 National Nutrition Survey (NNS) and the MRL when the STMR is not available to calculate the NESTIs. The ARfD of a chemical is the estimate of the amount of a substance in food, expressed on a body weight basis, that can be ingested over a short period of time, usually during one meal or one day, without appreciable health risk to the consumer, on the basis of all the known facts at the time of evaluation. ANZFA considers that the acute dietary exposure to the residues of a chemical is acceptable where the acute dietary exposure does not exceed the ARfD.

3.4 Food Consumption Data

The NRA and ANZFA have agreed that all dietary exposure assessments for agricultural and veterinary chemicals undertaken by the NRA will be based on food consumption data for raw commodities, derived from individual dietary records from the latest 1995 NNS. The Australian Bureau of Statistics with the Commonwealth Department of Health and Aged Care undertook the NNS survey over a 12-month period (1995-early 1996). The sample of 13,858 respondents aged 2 years and older was a representative sample of the Australian population and, as such, a diversity of food consumption patterns was reported.

A computer program developed by ANZFA derives raw commodity consumption data used in the NRA dietary exposure assessments. The program accesses the 13,858 individual dietary records from the 1995 NNS, and applies recipes to all mixed foods consumed by each individual to enable the total amounts of raw commodity equivalents consumed per individual person to be calculated. Population statistics (mean consumption, all respondents) are then derived from these individual raw commodity totals for use in NRA dietary exposure assessments.

However, for all new chemicals, review chemicals and those where the initial dietary exposure assessment based on mean consumption data appears to approach or exceed the ADI, the ANZFA computer program is used to calculate the total dietary exposure to a given chemical for each individual in the survey. Population statistics such as mean chemical exposure are then derived, thus taking into account as much as possible, individual dietary patterns from a diverse and representative sample of the Australian population. This program also enables high consumers of a given chemical to be identified, as well as the major foods contributing to total dietary exposure for that chemical.

4. REGULATION IMPACT ASSESSMENT

This Regulation Impact Statement (RIS) is preliminary only. The RIS identifies the affected parties, any alternative regulatory options and the potential impacts of any regulatory or non-regulatory provisions. The information needed to make an assessment of this application will include the information from public submissions. This preliminary RIS invites public comment on these areas.

4.1 Objective

To ensure that the residues associated with the proposed MRLs do not represent an unacceptable risk to public health and safety and that the proposed MRLs permit the legal sale of food that has been legally treated.

4.2 Options

Option 1: - to accept the requests made by the NRA and vary the *Food Standards Code*. Option 2: - to reject the requests and make no changes to the *Food Standards Code*.

4.3 Affected parties

The parties affected by this application are consumers, government, producers and food manufacturers of primary produce and foods into Australia.

4.4 Costs and benefits

4.4.1 Costs of accepting the application

- there will be a cost of disposal, replacement and dissemination of information about proscribed agricultural and veterinary chemicals;
- initially enforcement agencies, food manufacturers may have costs associated with compliance and enforcement of MRLs following the proposed amendments;
- some consumers may consider that any residues of agricultural and veterinary chemicals in food are not in the public interest and may regard the presence of any chemical residues in foods as a cost.

4.4.2 Benefits of accepting the application

- food producers will be legally able to sell produce legally treated with chemicals intended to improve stock and yields as well as controlling diseases and pests;
- it will ensure consistency between the health and agricultural regulations; and
- consumers may receive the potential benefits of improved crop and stock production through cheaper or better quality produce.

4.4.3 Costs of not accepting the application

- producers will <u>not</u> be able to legally sell legally treated produce treated with chemicals intended to increase productivity and/or control disease and pests. This will have costs for primary producers with consequent potential impacts on regional Australia;
- there may be increased production costs for manufacturers and ultimately increased costs to consumers if commodities which have been legally treated to improve productivity and/or control pests and disease cannot be legally sold; and
- the discrepancies between the *Food Standards Code* and the NRA MRL Standard would become greater leading to confusion for producers, consumers and government agencies.

4.4.4 Benefits of not accepting the application

• products complying with the existing MRLs could continue to be legally sold.

4.5 Conclusion and recommended option

The inclusion of the proposed MRLs is consistent with the current registered uses of the chemical products. The dietary exposure assessments indicate that the residues associated with the proposed MRLs do not represent an unacceptable risk to public health and safety. The NRA has already registered the chemical products and rejection of the MRLs would result in legally treated food not being able to be legally sold. Therefore, accepting the requested changes (Option 1) will benefit all stakeholders by maintaining public health and safety while permitting the legal sale of food treated with agricultural and veterinary chemicals to control pests and diseases and improve agricultural productivity.

5. CONSIDERATION OF ISSUES UNDER SECTION 13 OF THE AUSTRALIA NEW ZEALAND FOOD AUTHORITY ACT 1991

Subsection 13(1) of the *Australia New Zealand Food Authority Act 1991* (ANZFA Act) requires ANZFA to make a preliminary assessment of an application. In making that preliminary assessment, subsection 13(2) requires ANZFA to have regard to a number of matters set out in paragraphs 13(2)(a) to (e). Each of these matters is discussed below.

5.1 Paragraph 13(2)(a)

This Application relates to a matter that may warrant a variation to a food regulatory measure, because the application seeks an amendment of a standard. Under the ANZFA Act, a standard, by definition, is a food regulatory measure.

5.2 Paragraph 13(2)(b)

This Application is not so similar to a previous application that it ought not be accepted.

5.3 Paragraph 13(2)(c)

The Application does not suggest that the proposed amendment would present any further costs to the community, Government or industry. ANZFA has reviewed the Application and has not identified any adverse health effects that would result from the variations being made.

5.4 Paragraph 13(2)(d)

The nature of the Application is such that only an amendment to a standard (i.e. a food regulatory measure) can bring about what the applicant is seeking. No other measures appear to be available.

5.5 Paragraph 13(2)(e)

Other relevant matters for consideration by ANZFA are as follows.

5.5.1 Consideration of issues under Regulation 12 of the Australia New Zealand Food Authority Regulations 1994 which prescribes matters for the purpose of paragraph 13(2) (e) of the ANZFA Act.

5.5.1.1 Regulation 12(a)

Because it is a simple variation of a food regulatory matter requiring only the updating of a standard set out in the *Food Standards Code* this matter will be in category 2.

5.5.1.2 Regulation 12(b)

ANZFA considers that this Application will <u>not</u> confer an exclusive capturable commercial benefit on the applicant.

5.5.2 World Trade Organization Notification

As a member of the World Trade Organization (WTO) Australia is obligated to notify WTO member nations where proposed mandatory regulatory measures are inconsistent with any existing or imminent international standards and the proposed measure may have a significant effect on trade.

The MRLs prescribed in the *Food Standards Code* constitute a mandatory requirement applying to all food products of a particular class whether produced domestically or imported. Food products exceeding their relevant MRL set out in the *Food Standards Code* cannot legally be supplied in Australia.

In administrative terms and consistent with international practice, MRLs assist in regulating the use of agricultural and veterinary chemical products. MRLs indicate whether agricultural and veterinary chemical products have been used in accordance with the registered conditions of use.

MRLs assist in ensuring that residues are no higher than is necessary for effective control of pests and diseases. MRLs are also used as standards for the international trade in food.

This application will be notified as a Sanitary and Phytosanitary (SPS) measure in accordance with the WTO SPS agreement because the primary objective of the measure is to support the regulation of the use of agricultural and veterinary chemical products to protect human, animal and plant health and the environment.

5.5.3 Codex MRLs

The standards of the Codex Alimentarius Commission are used as the relevant international standards or basis as to whether a new or changed standard requires a WTO notification. There are no proposed MRLs in this application which have a relevant Codex MRL.

5.5.4 Imported Foods

As none of the proposed MRLs are reductions or deletion, the proposed MRLs cannot be considered to be trade restrictive.

6. CONSIDERATION OF ISSUES UNDER SECTION 15 OF THE AUSTRALIA NEW ZEALAND FOOD AUTHORITY ACT 1991

Subsection 15(1) of the ANZFA Act requires ANZFA to make a Draft Assessment (Full Assessment - s.15) of an application. In making that Draft Assessment (Full Assessment - s.15), subsection 15(3) requires ANZFA to have regard to a number of matters set out in paragraphs 15(3)(a) to (e). Each of these matters is discussed below.

6.1 Paragraph 15(3)(a)

As this application raises issues of minor significance and complexity only, ANZFA has not invited written submissions for the purposes of making the Initial / Draft Assessment. However, ANZFA will invite written submissions for the purpose of the Inquiry under s. 17(3)(c) of the ANZFA Act and will have regard to any submissions received.

6.2 Paragraph 15(3)(b)

Section 10 (1), paragraphs (a) to(c) of the ANZFA Act sets out the objectives of food regulatory measures and variations to food regulatory matters. Each of these measures are discussed below.

6.2.1 Paragraph 10(1)(a) the protection of public health and safety

The Chemicals and Non-prescription Medicines Branch of the TGA establish the ADI and where applicable the ARfD for the agricultural and veterinary chemicals. The NRA and ANZFA carry out estimations of dietary exposure to agricultural and veterinary chemicals and compare them to the TGA standards. Based on dietary exposure assessments, the residues associated with the proposed MRLs do not represent an unacceptable risk to public health and safety.

6.2.2 Paragraph 10(1)(b) the provision of adequate information relating to food to enable consumers to make informed choices

This is not relevant for this Application.

6.2.3 Paragraph 10(1)(c) the prevention of misleading or deceptive information

This is not relevant for this application.

In addition to these objectives, subsection 10(2) requires ANZFA to have regard to a number of matters set out in paragraphs 10(2)(a) to (d). Each of these matters is discussed below.

6.2.4 Paragraph 10(2)(a) the need for standards to based on risk analysis using the best available scientific evidence

The procedures used by ANZFA, the TGA and the NRA rely on the comprehensive examination of detailed scientific information, including a rigorous toxicological assessment and the dietary exposure assessments are undertaken in accordance with international protocols.

6.2.5 Paragraph 10(2)(b) the promotion of consistency between domestic and international food standards

This is addressed in section 5.5.

6.2.6 Paragraph 10(2)(c) the desirability of an efficient and internationally competitive food industry

The inclusion of the requested MRLs would assist in permitting the legal sale of legally treated food. Varying the *Food Standards Code* to include the proposed MRLs would promote trade and commerce and allow food industries to continue to be efficient and competitive.

6.2.7 Paragraph 10(2)(d) the promotion of fair trading in food

As the MRLs in the *Food Standards Code* apply to all food whether produced domestically or imported, the inclusion of the MRLs would benefit all producers equally.

6.3 Paragraph 15(3)(c)

ANZFA has undertaken a preliminary regulation impact assessment process, which also fulfils the requirement in New Zealand for an assessment of compliance costs. That process concluded that the amendment to the *Food Standards Code* is necessary, cost effective and of benefit to both producers and consumers.

6.4 Paragraph 15(3)(d)

The nature of the application is such that only an amendment to a standard (i.e. a food regulatory measure) can bring about what the applicant is seeking. No other measures appear to be available.

6.5 Paragraph 15(3)(e)

This is addressed in section 5.5.

7. CONCLUSION

The dietary exposure assessments indicate that the residues associated with the MRLs do not represent an unacceptable risk to public health and safety. The NRA has already registered the chemicals in this application and rejection of the MRLs would result in legally treated food not being able to be legally sold. Therefore, the requested changes will benefit all stakeholders by maintaining public health and safety while permitting the legal sale of food treated with agricultural and veterinary chemicals to control pests and diseases and improve agricultural productivity.

8. INVITATION FOR PUBLIC SUBMISSIONS

8.1 Consultation

The Authority decided, pursuant to section 36 of the *Australia New Zealand Food Authority Act 1991*, to omit to invite public submissions in relation to the Application prior to making a Full Assessment. However, ANZFA now invites written submissions for the purpose of the Inquiry under s.17(3)(c) of the ANZFA Act and will have regard to any submissions received. The Authority was satisfied that omitting to invite public submissions prior to making a Full Assessment was warranted as the Application raises matters of a mechanical nature that are of minor significance or complexity.

Section 63 of the Act provides that, subject to the *Administrative Appeals Tribunal Act 1975*, an application for a review of the Authority's decision may be made to the Administrative Appeals Tribunal by a person whose interests are significantly affected by the decision to omit to invite public submissions in relation to the Proposal.

8.2 Content of Submissions

Written submissions containing technical or other relevant information which will assist ANZFA in undertaking an assessment on matters relevant to the application, including consideration of its regulatory impact, are invited from interested individuals and organizations. Information providing details of potential costs and benefits of the proposed change to the Code from stakeholders is highly desirable. Claims made in submissions

should be supported wherever possible by referencing or including relevant; studies, research findings, trials, surveys etc. Technical information presented should be in sufficient detail to allow independent scientific assessment.

Submissions may provide a more general comment and opinion on the issue although those framing their submissions should bear in mind ANZFA's regulatory role specifically relates to food supplied for human consumption in Australia and New Zealand. The ANZFA Act 1991 sets out the objectives of the Authority in developing food regulatory measures and variations of food regulatory measures as:

- (a) the protection of public health and safety; and
- (b) the provision of adequate information relating to food to enable consumers to make informed choices; and
- (c) the prevention of misleading or deceptive conduct.

In developing food regulatory measures and variations of food regulatory measures The Authority must also have regard to the following:

- (a) the need for standards to be based on risk analysis using the best available scientific evidence:
- (b) the promotion of consistency between domestic and international food standards;
- (c) the desirability of an efficient and internationally competitive food industry;
- (d) the promotion of fair trading in food.

Submissions addressing the issues in the context of the objectives of the Authority as set out in the *ANZFA Act 1991* will be more effective in supporting their case.

Written submissions containing technical or other relevant information which will assist the Authority in undertaking a final assessment on matters relevant to the application, including consideration of its regulatory impact, are invited from interested individuals and organisations. Technical information presented should be in sufficient detail to allow independent scientific assessment.

Submissions providing more general comment and opinion are also invited. The Authority's policy on the management of submissions is available from the Standards Liaison Officer upon request.

Following its draft assessment of the application the Authority may prepare a draft standard or draft variation to a standard (and supporting draft regulatory impact statement), or decide to reject the application/proposal. If a draft standard or draft variation is prepared, it is then circulated to interested parties, including those from whom submissions were received, with a further invitation to make written submissions on the draft. Any such submissions will then be taken into consideration during the inquiry, which the Authority will hold to consider the draft standard or draft variation to a standard.

8.3 Transparency

The processes of ANZFA are open to public scrutiny, and any submissions will ordinarily be placed on the public register of ANZFA and made available for inspection. If you wish any confidential information contained in a submission to remain confidential to ANZFA, you

should clearly identify the sensitive information and provide justification for treating it in confidence. The *Australia New Zealand Food Authority Act 1991* requires ANZFA to treat in confidence trade secrets relating to food and any other information relating to food, the commercial value of which would be or could reasonable be expected to be destroyed or diminished by disclosure.

Contact details for submitters are recorded so that the Authority can continue to keep them informed about progress of the application or proposal.

8.4 Deadlines

The deadlines for submissions are clearly indicated in the advertisements calling for comment and in the relevant Assessment Reports. While the Authority often provides comment periods of around 6 weeks, the periods allowed for comment may vary and may be limited to ensure critical deadlines for projects can be met. Unless the Project Manager has given specific consent for an extension, the Authority cannot guarantee that submissions received after the published closing date will be considered.

8.5 Delivery of Submissions

Submissions must be made in writing and should be clearly marked with the word 'Submission' and quote the **correct project number** and **title**. Submissions may be sent by mail to the **Standards Liaison Officer** at one of the following addresses:

Australia New Zealand Food Authority

Australia New Zealand Food Authority

PO Box 7186 PO Box 10559

Canberra BC ACT 2610 The Terrace WELLINGTON 6036

AUSTRALIA NEW ZEALAND Tel (02) 6271 2258 Tel (04) 473 9942

email: <u>slo@anzfa.gov.au</u> email: <u>anzfa.nz@anzfa.gov.au</u>

Submissions may also be sent electronically through the submission form on the ANZFA website www.anzfa.gov.au. Electronic submissions should also include the full contact details of the person making the submission on the main body of the submission so that the contact details are not separated.

Submissions should be received by the Authority by: 24 APRIL 2002

8.6 Further Information

Further information on this and other matters should be addressed to the Standards Liaison Officer at the Australia New Zealand Food Authority at one of the above addresses.

Assessment reports are available for viewing and downloading from the ANZFA website or alternatively paper copies of reports can be requested from the Authorities Information Officer at info@anzfa.gov.au.

ATTACHMENTS

- Draft Variation to the *Food Standards Code*. Summary of MRLs. Statement of Reasons. 1.
- 2.
- 3.

DRAFT VARIATIONS TO THE FOOD STANDARDS CODE

To commence: On gazettal

- [1] Standard A14 of Volume 1 of the Food Standards Code is varied by -
- [1.1] inserting in columns 1 and 2 respectively of Schedule 1 each chemical (shown in bold type) and its associated food and maximum residue limit for that food -

| Chemical | MRL |
|--------------------------|------|
| Food | |
| Acetamiprid | |
| Cotton seed | 0.05 |
| Cucumber | 0.2 |
| Edible offal (mammalian) | 0.05 |
| Eggs | 0.01 |
| Meat (mammalian) | 0.01 |
| Milks | 0.01 |
| Potato | 0.01 |
| Poultry, edible offal of | 0.05 |
| Poultry, meat | 0.01 |
| Tomato | 0.1 |
| | |
| Quinoxyfen | |
| Dried grapes | 5 |
| Grapes | 2 |

Explanatory Note: These are new MRLs for new chemicals and foods.

[1.2] omitting from columns 1 and 2 respectively of Schedule 1, in relation to each chemical (shown in bold type), the food and the maximum residue limit for that food -

Chemical

| Food | MRL |
|---|-----|
| Aminoethoxyvinylglycine Stone fruits | 0.2 |
| Metalaxyl | |
| Vegetables [except cucurbits; | 0.1 |
| fruiting vegetables; leafy | |
| vegetables] | |

Explanatory Note: Permission for a residue of the specified chemical in these foods is being repealed.

[1.3] inserting in columns 1 and 2 respectively of Schedule 1, in relation to the chemical (shown in bold type), the food and the maximum residue limit for that food -

| Chemical Food | MRL |

A SUMMARY OF THE REQUESTED MRLS FOR EACH CHEMICAL AND AN OUTLINE OF THE INFORMATION SUPPORTING THE REQUESTED CHANGES TO THE FOOD STANDARDS CODE.

The Full Evaluation Reports for individual chemicals are available upon request from the relevant Project Manager at ANZFA.

NOTES ON TERMS USED IN THE TABLE

ADI – Acceptable Daily Intake - The ADI is the daily intake of an agricultural or veterinary chemical, which, during the consumer's entire lifetime, appears to be without appreciable risk to the health of the consumer. This is based on all the known facts at the time of the evaluation of the chemical. The ADI is expressed in milligrams of the chemical per kilogram of body weight.

ARfD – Acute Reference Dose - The ARfD is the estimate of the amount of a substance in food, expressed on a body weight basis, that can be ingested over a short period of time, usually during one meal or one day, without appreciable health risk to the consumer, on the basis of all the known facts at the time of evaluation.

LOQ - Limit of Quantification - The LOQ is the lowest concentration of a pesticide residue contaminant that can be identified and quantitatively measured in a specified food, agricultural commodity or animal feed with an acceptable degree of certainty by a regulatory method of analysis.

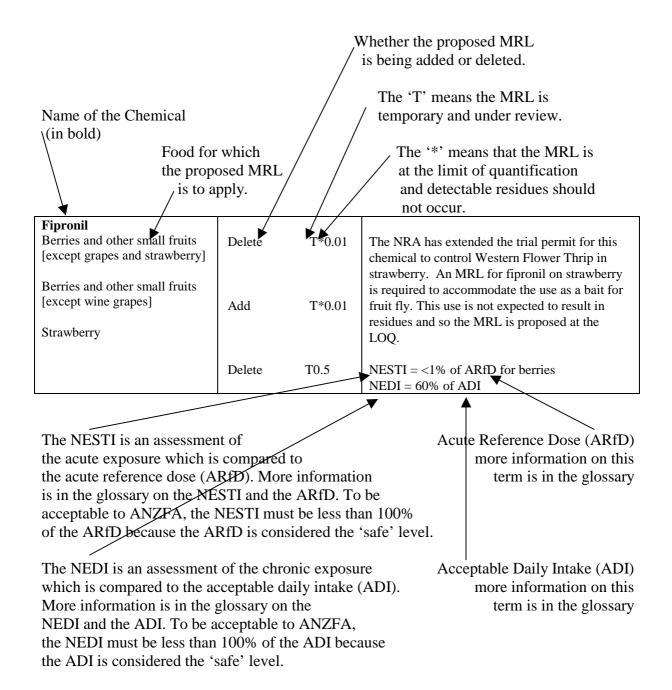

NEDI - National Estimated Dietary Intake - The NEDI represents a more realistic estimate of dietary exposure and is the preferred calculation. It may incorporate more refined food consumption data including that for specific sub-groups of the population. The NEDI calculation may take into account such factors as the proportion of the crop or commodity treated; residues in edible portions; the effects of processing and cooking on residue levels; and may use median residue levels from supervised trials other than the MRL to represent pesticide residue levels. In most cases the NEDI is still an overestimation because the above data is often not available and in these cases the MRL is used.

NESTI - National Estimated Short Term Intake - The NESTI is used to estimate acute dietary exposure. Acute (short term) dietary exposure assessments are undertaken when an acute reference dose (ARfD) has been determined for a chemical. Acute dietary exposures are normally only estimated based on consumption of raw unprocessed commodities (fruit and vegetables) but may include consideration of meat, offal, cereal, milk or dairy product consumption on a case-by-case basis. ANZFA has used ARfDs set by the TGA and Joint FAO/WHO Meeting on Pesticide Residues, the consumption data from the 1995 NNS and the MRL when the STMR is not available to calculate the NESTIs.

The NESTI calculation incorporates the large portion (97.5 percentile) food consumption data and can take into account such factors as the highest residue on a composite sample of an edible portion; the supervised trials median residue (STMR), representing typical residue in an edible portion resulting from the maximum permitted pesticide use pattern; processing factors which affect changes from the raw commodity to the consumed food and the variability factor.

23

The following are examples of entries and the proposed MRLs listed are not part of this application.

Information about the use of the chemical is provided so consumers can see the reason why the residues

may occur in food.

Data from the Australian Total Diet Survey (ATDS) is provided when available because it provides an indication of the typical exposure to chemicals in table ready foods. The ATDS results are more realistic because the NEDI and NESTI calculations are theoretical calculations that conservatively overestimate exposure.

| Chlorpyrifos | | | • |
|--------------|-----|------|---|
| Coffee beans | Add | T0.5 | NRA extension of use for the control of pests. The 18 th ATDS (1996) dietary exposure estimate for chlorpyrifos, as a percentage of the ADI is equivalent to 0.53% of ADI for adult males and up to 1.42% for 2 year olds. The 19 th ATDS (1998) dietary exposure estimate for chlorpyrifos, as a percentage of the ADI is equivalent to 0.51% of ADI for adult males and up to 2.55% of ADI for 2 year olds. NEDI = 83% of ADI |

Small variations may be noted in the exposure assessment between different ATDSs. These variations are minor and typically result because of the different range of foods in the individual surveys.

SUMMARY OF THE REQUESTED MRLS FOR APPLICATION A455

Glossary;

| 1. | ADI | Acceptable Daily Intake. |
|----|-------|--|
| 2. | ARfD | Acute Reference Dose |
| 3. | ATDS | Australian Total Diet Survey |
| 4. | LOQ | Limit of Analytical Quantification. |
| 5. | NEDI | National Estimated Daily Intake. |
| 6. | NESTI | National Estimated Short Term Intake |
| 7. | * | MRL set at or about the limit of quantification. |
| 8. | Т | Temporary MRL |

| Chemical | MRL | | Information |
|--------------------------------|------------|--------|---|
| Food | (mg/kg) | | |
| Acetamipirid | | == | |
| Cotton seed | Add | T0.05 | This chemical is used to control insects on |
| Cucumber | Add | T0.2 | vegetable crops. |
| Edible offal (mammalian) | Add | T*0.05 | |
| Eggs | Add | T*0.01 | |
| Meat (mammalian) | Add | T*0.01 | |
| Milks | Add | T*0.01 | |
| Potato | Add | T*0.01 | |
| Poultry, Edible offal of | Add | T*0.05 | |
| Poultry meat | Add | T*0.03 | |
| Tomato | | | NEDI = <1% of ADI |
| | Add | T0.1 | NESTI = <1% of $ARfD$ |
| Aminoethoxyvinylglycine | | | |
| Apple | Delete | T0.1 | This chemical is used as a plant growth regulator |
| | Substitute | 0.1 | for stone fruit to improve harvest management, |
| | | | fruit quality and storage potential. |
| Nectarine | Add | 0.2 | |
| Peach | Add | 0.2 | |
| Stone fruits | Delete | T0.2 | |
| Stone fruits [except nectarine | Add | T0.2 | |
| and peach] | 7100 | 10.2 | NEDI = 32% of ADI |
| Azoxystrobin | | | |
| Poppy seed | Add | T*0.02 | The NRA has issued a trial permit to Tasmanian |
| | | | growers of poppies to use this chemical to |
| | | | prevent fungal growth on poppies. |
| | | | NEDI = <1% of ADI |
| Bifenthrin | | | |
| Stone fruits | Delete | T0.5 | The NRA has issued a trial permit for this |
| | Substitute | T1 | chemical to be used to control carpophilus |
| | | | beetle in stone fruit. |
| | | | NEDI = 89% of ADI (MRLs have been used to |
| | | | calculate the NEDI and the exposure would be |
| | | | much lower if typical residues were used) |
| Butafenacil | | | 71 |
| Grapes | Add | T*0.02 | This chemical is used to control weeds in |
| Pome fruits | Add | T*0.02 | dormant pome and stone fruit and grapevines. |
| Stone fruits | Add | T*0.02 | NEDI = 5% of ADI |
| Cadusafos | 1100 | 1 0.02 | 7.221 070 011201 |
| Citrus fruits | Add | *0.01 | This chemical is used to control insect pests in |
| | 7100 | 0.01 | the soil around citrus trees. |
| | | | NEDI = <1% of ADI |
| Dichlorprop | | | TILDI - \1/0 UI ADI |
| Citrus fruits | A 4 4 | TO 1 | The ND A hove issued a trial normit for this |
| Citius Ituits | Add | T0.1 | The NRA have issued a trial permit for this |
| | | | chemical to be used in field trials to control |
| | | | fruit drop in citrus fruit trees. |
| | | | NEDI = <1% of ADI |

| Dithiocarbamates | | | |
|--|----------------------|----------------|---|
| Parsnip | Add | T1 | The NRA have issued an off the label permit |
| | Aud | | for mancozeb to be used to control a variety of fungal diseases in parsnips in Tasmania. In the 19 th (1998) ATDS the estimated dietary exposure to thiram (the dithiocarbamate with the lowest ADI) was at 63% of the ADI. This MRL is for the use of the dithiocarbamate mancozeb, which has a higher ADI than thiram. Given the consumption of parsnips, the results from the 1998 ATDS, the fact that the trial permit is for the chemical mancozeb and on the basis of the ATDS and data from an Australian trial, the additional exposure to dithiocarbamate residues from parsnips would not result in an unacceptable risk to public health. |
| Indoxacarb | | | |
| Lettuce, Head | Delete Substitute | T3 3 | This chemical is used to control insects on wine grapes, lettuce and tomatoes |
| Tomato | Add | 0.2 | |
| Wine grapes | Add | 1 | NEDI = 49% of ADI |
| Metalaxyl | | | |
| Podded pea (young pods) | Add | T1 | This chemical is used to control fungal diseases |
| Poppy seed | Add | *0.02 | on vegetables and poppies |
| Vegetables [except fruiting vegetables, cucurbits and leafy vegetables] | Delete | 0.1 | |
| Vegetables [except fruiting vegetables, cucurbits; leafy vegetables and Podded pea | Add | 0.1 | |
| (young pods)] | | | NEDI = 4% of ADI |
| Myclobutanil | | | |
| Strawberry | Delete | T1 | This chemical is used to control powdery |
| | Substitute | 2 | mildew in strawberry. NEDI = 2% of ADI |
| Picolinafen | | | |
| Field pea (dry) | Add | *0.02 | This chemical is used to control weeds in field pea crops. |
| Ducarmidana | | | NEDI = 2% of ADI |
| Procymidone Carrot | Add | T2 | This chemical is used to control fungal diseases |
| Snow peas | Delete | T5 | in carrots and snow peas. |
| | Substitute | 5 | NEDI = 20% of ADI |
| Quinoxyfen | Substitute | | 1,201 - 20/0 011101 |
| Dried grapes | Add | T5 | This chemical is used to treat powdery mildew |
| Grapes | Add | T2 | in grapes. NEDI = <1% of ADI |
| Spinosad | | | |
| Eggs | Delete Substitute | *0.01 T0.05 | The NRA has issued a trial permit for this chemical to be used to control litter beetle and flies in poultry sheds. |
| Poultry, Edible offal of | Delete Substitute | *0.01 T0.05 | Thes in pourty shous. |
| Poultry fats/skin | Add | T0.2 | NEDI = 11% of ADI |
| y | Auu | 10.4 | 11/0 OI VIDI |

| Tebufenozide | | | |
|---------------------|-----|-----|--|
| Persimmon, Japanese | Add | T1 | This chemical is used to control insects on |
| | | | persimmons |
| | | | NEDI = 11% of ADI |
| Thiodicarb | | | |
| Potato | Add | 0.1 | This chemical is used to control Heliothis on potato crops. |
| | | | NEDI = 84% of ADI. MRLs have been used to calculate the NEDI; the exposure would be |
| | | | much lower if typical residues were used. In addition, this calculation uses the MRLs for |
| | | | both thiodicarb and methomyl because the |
| | | | metabolism of these compounds is similar. |
| | | | Methomyl has a lower ADI than thiodicarb and |
| | | | this lower ADI has been used in the combined NEDI. Where MRLs are established for both compounds the higher MRL has been used. |
| | | | NESTI = 3% of the ARfD |
| Trifloxystrobin | | | |
| Dried grapes | Add | 2 | This chemical is used to control powdery and downy mildew in table grapes. |
| | | | NEDI = 2% of ADI |

STATEMENT OF REASONS

APPLICATION A455 – MAXIMUM RESIDUE LIMITS

FOR RECOMMENDING A VARIATION TO THE FOOD STANDARDS CODE

This Application (A455) seeks to amend Maximum Residue Limits (MRLs) for non-antibiotic agricultural and veterinary chemicals in the *Food Standards Code*. It is a routine application from the National Registration Authority for Agricultural and Veterinary Chemicals (NRA), to update the *Food Standards Code* in order to reflect current registration status of agricultural and veterinary chemicals in use in Australia.

On 24 November 2000, the Australia New Zealand Food Standards Council (ANZFSC) adopted the *Australia New Zealand Food Standards Code* (published as Volume 2 of the *Food Standards Code*). Subsequently, all applications to amend MRLs will now be incorporated into Volumes 1 and 2 of the *Food Standards Code* (Standard A14 and Standard 1.4.2 respectively). Consequently, all references throughout this document to the *Food Standards Code* are references to both Volumes 1 and 2 of the *Food Standards Code*.

The Agreement between the Commonwealth of Australia and the Government of New Zealand to establish a system for the development of joint food standards (the Treaty), excluded MRLs for agricultural and veterinary chemicals in food from the joint Australia New Zealand food standards setting system. Australia and New Zealand independently and separately develop MRLs for agricultural and veterinary chemicals in food.

There are no proposed MRLs for antibiotic residues in this application.

ANZFA recommends progressing the Application for the following reasons:

- The dietary exposure assessments indicate that the residues associated with the MRLs do not represent an unacceptable risk to public health and safety. The NRA has already registered the chemical products in this application and the rejection of the MRLs would result in legally treated food not being able to be legally sold. Therefore, the requested changes will benefit all stakeholders by maintaining public health and safety while permitting the legal sale of food treated with agricultural and veterinary chemicals to control pests and diseases and improve agricultural productivity.
- The NRA has assessed appropriate toxicology, residue, animal transfer, processing and metabolism studies, in accordance with the *Guidelines for Registering Agricultural and Veterinary Chemicals, the Ag and Vet Requirements Series, 1997*, to support the use of chemicals on commodities as outlined in this application.
- The Therapeutic Goods Administration (TGA) of the Commonwealth Department of Health and Aged Care has undertaken an appropriate toxicological assessment of the chemical products and has established relevant acceptable daily intakes (ADI) and where applicable the acute reference dose.

- None of the Australia New Zealand Food Authority's (ANZFA) section 10 objectives of food regulatory measures are compromised by the proposed changes.
- ANZFA has undertaken a preliminary regulation impact assessment process, which also fulfils the requirement in New Zealand for an assessment of compliance costs. That process concluded that the amendment to the *Food Standards Code* is necessary, cost effective and of benefit to both producers and consumers.

A SUMMARY OF THE REQUESTED MRLS

Please see Attachment 2 of the Initial/Draft Assessment Report.

WORLD TRADE ORGANIZATION (WTO) NOTIFICATION

As a member of the WTO Australia is obligated to notify WTO member nations where proposed mandatory regulatory measures are inconsistent with any existing or imminent international standards and the proposed measure may have a significant effect on trade.

MRLs prescribed in the *Food Standards Code* constitute a mandatory requirement applying to all food products of a particular class whether produced domestically or imported. Food products exceeding their relevant MRL set out in the *Food Standards Code* cannot legally be supplied in Australia.

In administrative terms and consistent with international practice, MRLs assist in regulating the use of agricultural and veterinary chemical products. MRLs indicate whether agricultural and veterinary chemical products have been used in accordance with the registered conditions of use. MRLs, while not direct public health limits, act to protect public health and safety by minimising residues in food consistent with the effective control of pests and diseases. MRLs are also used as standards for the international trade in food.

This application contains variations to MRLs which are not addressed in the international Codex standard. MRLs in this application also relate to chemicals used in the production of heavily traded agricultural commodities that may indirectly have a significant effect on trade of derivative food products between WTO members.

This Application will be notified as a Sanitary and Phytosanitary (SPS) measure in accordance with the WTO SPS agreement because the primary objective of the measure is to support the regulation of the use of agricultural and veterinary chemical products to protect human, animal and plant health and the environment.

DRAFT VARIATIONS TO THE FOOD STANDARDS CODE

Please see Attachment 1 of the Initial/Draft Assessment Report.
