Subject: submission on proposal P1042

Please accept this submission on proposal P1042

There is no valid reason to prevent foods from hemp seeds to be kept from the public. Hemp products can and have been used for many years with no adverse consequences.

Hemp requires little or no sprays that are often needed to produce other food crops and as a person who cares about the state of our environment, I wish to see more Hemp grown on this planet so that other crops which are presently sprayed by a multitude of chemicals can be decreased.

Hemp seed food products are known to be very high in nutrition and it would benefit the population of New Zealand to have easy access to this high value food. There are growing and widespread diseases caused by poor diets in NZ which costs us all huge amounts of money to address. The availability of hemp seed food products, including the seed itself, could save New Zealanders the stress and cost of the sad growth of obesity and diabetes we face today.

I trust you will make the intelligent decision to make this useful food available to growers and consumers of New Zealanders immediately.

Thank you for considering my submission.

kind regards,
Victoria Davis
