To whom it concerns,

I think this is a very dangerous path for Australia to follow. America is one of the sickest nation in the world I think a main contributor to this. GM foods and heavy use of chemicals in the food chain are cause of this I don't think Australians want to this as is witnessed by more people looking to organic produce. Where these companies moved into Africa proposing these farming techniques it was a complete failure I therefore strongly oppose changes to the Food Code that would allow a wide range of GM foods, made using novel methods that have scant history of safe use, to be sold without safety assessment or labelling. These would include meat and milk from some genetically modified animals. Polling shows most Australians, and global citizens don't want to eat genetically modified (GM) foods. All GM foods should be independently assessed for their health and environmental hazards and risks, be labelled as GM, and be traceable. This will allow farmers, food producers, retailers, and shoppers to avoid them, for many important reasons.

Agrochemical companies cannot be trusted to self-assess the safety of GM foods as they have an appalling record of manipulating data to promote dangerous products.

Gene editing techniques have been found to make genetic changes that could never occur in nature and to result in widespread genetic damage that often goes undetected by GM developers.

I support expanding the definition for 'gene technology' so FSANZ continues to assess and regulate all techniques and methods of genetic modification, other than conventional breeding. The proposal to deregulate new and emerging GM techniques and their food products, which pose new and unassessed risks, is completely unacceptable.

Thank you for taking my well-founded and informed concerns into consideration.

Yours sincerely,
