To whom it concerns,

I emphatically believe that genetically modified foods are a danger we have no need to pursue. To allow them to infiltrate our food system with insufficient regulation (or indeed at all), leaving shoppers with no way to track and thereby avoid them, shows an appalling lack of respect for the legitimate concerns of many, many people, and a disregard for the health of the population and the integrity of our natural world.

I support expanding the definition for 'gene technology' so FSANZ continues to assess and regulate all techniques and methods of genetic modification, other than conventional breeding. The proposal to deregulate new and emerging GM techniques and their food products, which pose new and unassessed risks, is completely unacceptable.

Thank you for taking my well-founded and informed concerns into consideration.
