Dear Sir/Madame,

I here by would like to contribute my submission regarding the above Proposal.

I am in favour of supporting option 4 as I understand it bellow.

*'Option 4 – Amend the Code to allow for Category 1, 2 & 3 products
Option 4 means the preparation of amendments to Standard 4.2.4 to allow for the production and sale of all raw milk products, including raw drinking milk, provided they met production and processing requirements that could manage the safety of the product.'*

Providing that producer can meet safe processing requirements, I am in favour of allowing raw milk products
especially access to raw drinking milk from producers that can manage the safety of the milk.

I think that it goes to the heart of basic freedoms to acquire food. Natural, clean, safe food source. This can be achieved
through the correct risk management. It has been achieved successfully throughout generations with Milk being one of the main staple food of
human kind. The right to acquire this staple in its NATURAL form must be protected. It has been already eroded with cows milk. If this
proposal goes through then it will be totally destroyed.

Pasteurisation is not the answer, it destroys milk and transforms it into a dead pool of bacteria good and bad while the intention
is to protect us against the bad. Pasteurizing milk destroys enzymes, diminishes vitamin, denatures fragile milk proteins,
destroys vitamin B12, and vitamin B6, kills beneficial bacteria and promotes pathogen growth through the absence of
competing good bacteria left to keep it from rotting.

I also want to point out that despite of our best efforts, there is something seriously wrong with our methods. This is evident with the degeneration of our over all health , ours and that of our kids and grandkids. Our current methods may
work in a strict legal sense of protecting consumer from harm , but in reality these methods only serve to produce bad, worthless food product
and harm in the long term. There is no denying that as the results are self evident.

The producers that are able to supply the milk and products to the standards that are already in place can do so and can continue to do so.

Keep raw milk for human consumption as an option. Keep our basic human right to choose what we eat !
